UpdateProject: React + Redux Architecture

history.push ("/dashboard")
Reloads Dashboard.JS

Spring Boot
(Backend Application)

Redux Store

Projects{---}
 Project{--},
Errors {---}.

Return
project object
or Errors

Send Project object

{axios}

dispatch

passing existing object

Errors?

ProjectAction.JS
{createProject}

UpdateProduct.JS

If "errors"=true

errorReducer
return errors

Requirements to
return "errors" to
Component
• "Connect" to store
• Map State to Props
• Receive "new Props"
• SetState in errors{}
• Display errors.
